## Ricerca e produzione italiana!

Una gamma di oltre 350 varietà standard ed ibride, prodotte con le più moderne tecnologie, con un controllo accurato di tutte le fasi di lavorazione, allo scopo di offrire un prodotto altamente qualitativo e dalle caratteristiche vincenti. Miglioramento costante dei prodotti e dei processi di lavorazione mediante investimenti in ricerca e sviluppo, marketing, formazione del personale e filosofia aziendale ispirata ai principi della qualità totale.

La Semiorto Sementi è un'azienda che da oltre quarant'anni è presente con successo sui mercati nazionali ed internazionali.

Azienda dinamica, moderna e capace di monitorare ed anticipare le evoluzioni del mercato delle sementi, sia hobbistico che professionale; La Semiorto Sementi propone sementi accuratamente selezionate, lavorate e presentate in un packaging innovativo, graficamente accattivante e completo nelle descrizioni.

Disponiamo di servizi tecnici, amministrativi e commerciali efficienti, disponibili a soddisfare le richieste di informazioni riguardanti le caratteristiche dei prodotti. Il nostro customer service è pronto a fornire i contatti del responsabile di zona più vicino, ad accogliere e celermemente evadere gli ordini inoltrati per telefono, via fax, e-mail o direttamente dal sito internet ([www.semiorto.com](http://www.semiorto.com)) aggiornato e rinnovato nei contenuti.

Un'organizzazione che cerca di fare dell'efficienza e della qualità i propri maggiori segni distintivi, che affronta il presente con il massimo impegno e guarda al futuro con ottimismo, perché CHI SEMINA BENE, RACCOGLIE MEGLIO!

PAOLO MANCUSO  
Amministratore Unico

More than 350 standard and hybrid varieties are produced with the most advanced technologies, with close monitoring of all stages of processing, in order to offer a high quality product and a winning characteristics. We are continuously improving our product process through Research and Development, marketing, staff training and business philosophy based on the principles of total quality.

La Semiorto Sementi is a company with four decades at successful presence a local and international markets.

Our dynamic and modern company is able to monitor and anticipate the seeds market developments, both hobby and professional; La Semiorto Sementi offers carefully selected seeds, processed and presented in an innovative packaging, appealing and with comprehensive descriptions.

We have technical, administrative and commercial efficient services, available to meet requests of information about characteristics of our products. Our customer service is ready to give you information and contacts regarding sales manager, receive and to quickly process orders submitted by phone, fax, e-mail or directly from on website ([www.semiorto.com](http://www.semiorto.com)) updated and renewed in content.

An organization that seeks to make the efficiency and quality of its major brands, which addresses this with the utmost dedication and looks to the future with optimism, because HE WHO SOWS WELL, HARVESTS BETTER!

# Buste MAXIOR

Buste in Carta Formato reale cm. 11,5x16 con EUROFORO - germinazione garantita 24 mesi

Tutte le buste "MAXIOR" sono confezionate in pratici contenitori espositivi. Sul retro di ogni confezione troverete tutte le informazioni tecnico-colturali ed il codice articolo per il riassortimento (lo stesso come da catalogo). N.B. Non si accettano ordini inferiori ad un contenitore per varietà e cioè N. 50 buste.

All "MAXIOR" bags are packed in special show boxes. On the back of every seed bag are printed all the technical information for sowing and the article code for the reordering (the same printed on this catalogue). Please note that for each item ordered, the minimum quantity is one complete show box (50 bags).

Il periodo di semina è puramente indicativo, esso può variare anche sensibilmente in base alle condizioni climatiche ed al metodo di coltivazione.

N. 2.400 BUSTE (a Vs. scelta)  
TOPSEED Linea TM

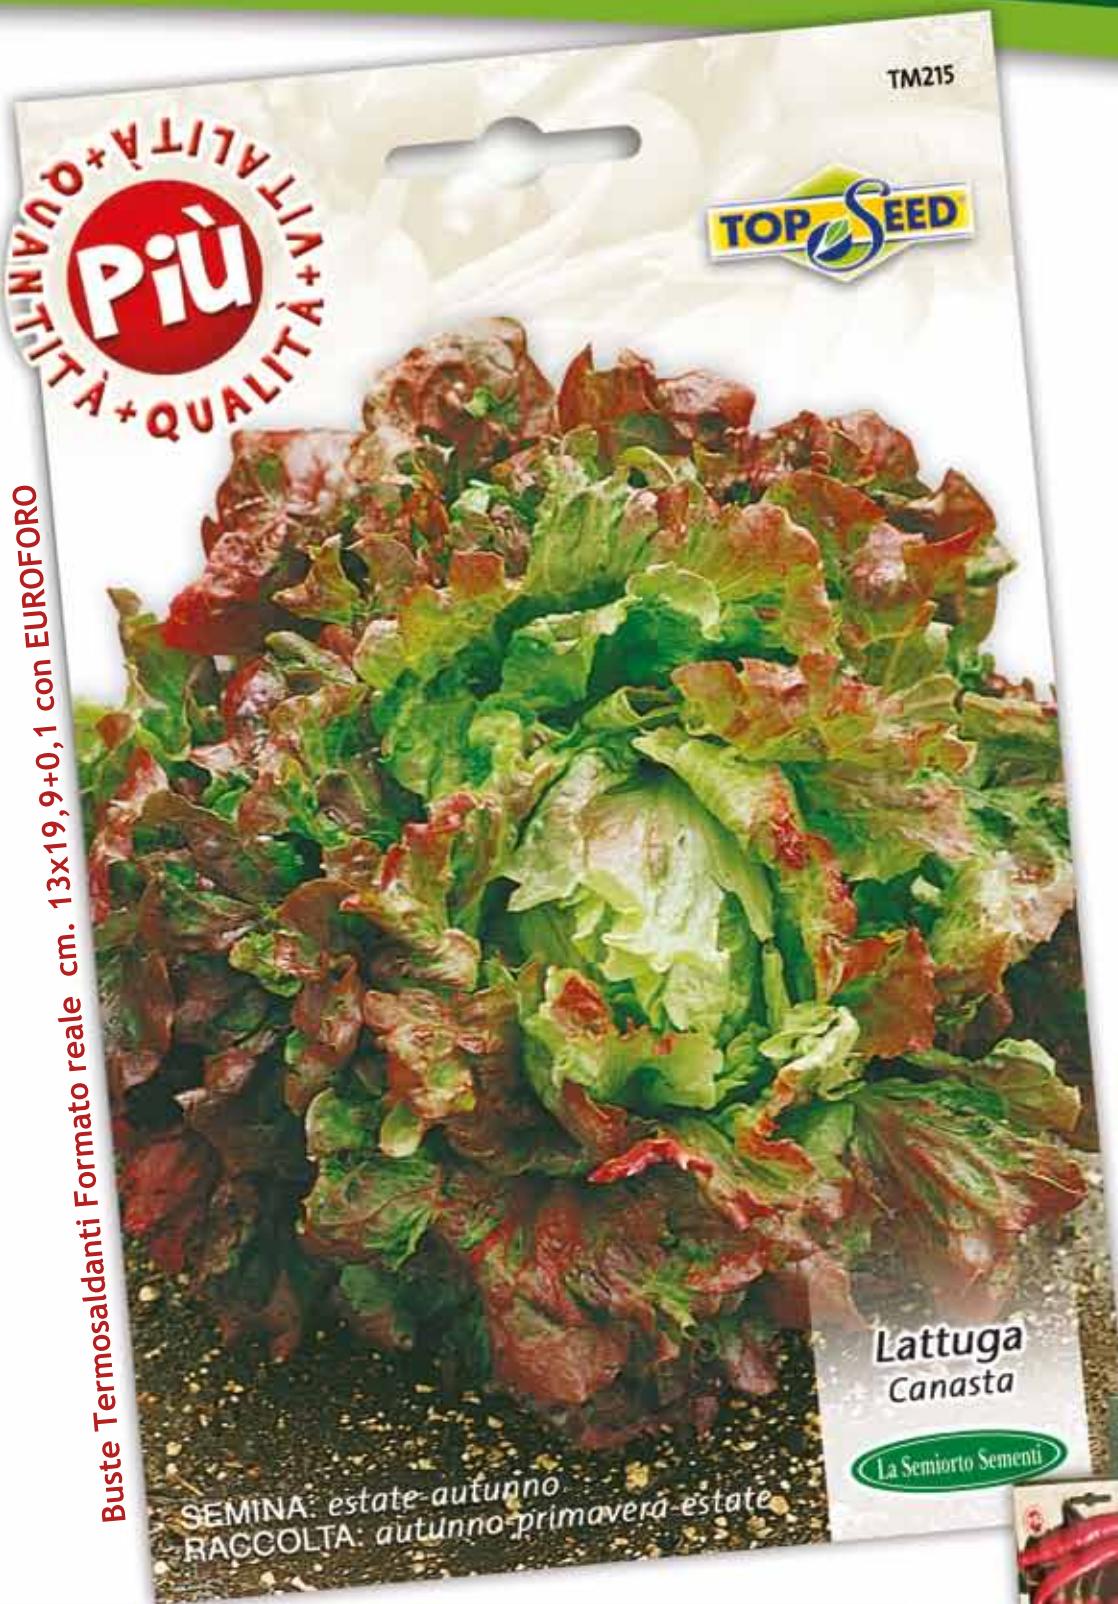

## TOPSEED TM DISPLAY

CONTAINING  
N. 49 HOOKS EURO HOLE  
CORRESPONDING TO  
N. 2.400 BAGS (at your choice)  
IN TOTAL

# Buste Linea TM

Sementi selezionate + germinabilità controllata = garanzia di successo - germinazione garantita 30 mesi

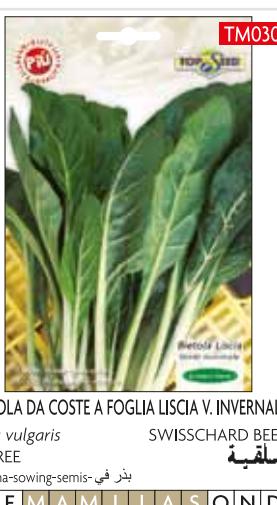

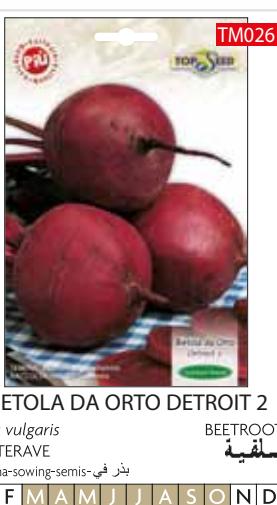

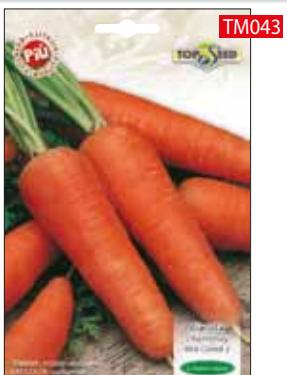

Tutte le buste "Top Seed" sono confezionate in pratici contenitori espositivi. Sul retro di ogni confezione troverete tutte le informazioni tecnico-colaturali ed il codice articolo per il riassortimento (lo stesso come da catalogo).

N.B. Non si accettano ordini inferiori ad un contenitore per varietà e cioè N. 25 buste.

All Top Seeds bags are packed in special show boxes. On the back of every seed bag are printed all the technical information for sowing and the article code for the reordering (the same printed on this catalogue). Please note that for each item ordered, the minimum quantity is one complete show box (25 bags).

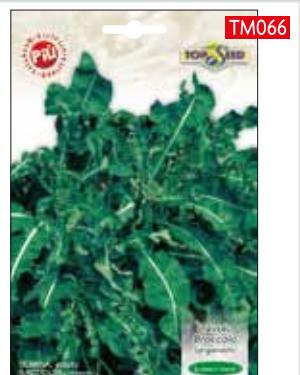

Il periodo di semina è puramente indicativo, esso può variare anche sensibilmente in base alle condizioni climatiche ed al metodo di coltivazione.

# Buste AROMATICHE

Buste Termosaldati Formato reale cm. 11,5x15,7+0,3 con EUROFORO - germinazione garantita 30 mesi

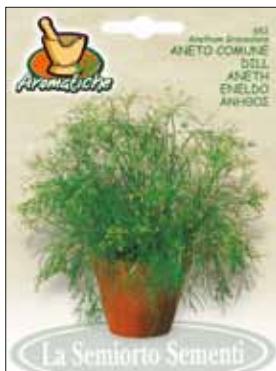

Tutte le buste "Aromatiche" sono confezionate in pratici contenitori espositivi. Sul retro di ogni confezione troverete tutte le informazioni tecnico-colturali ed il codice articolo per il riassortimento (lo stesso come da catalogo). N.B. Non si accettano ordini inferiori ad un contenitore per varietà e cioè N. 25 buste.

All "Aromatiche" bags are packed in special show boxes. On the back of every seed bag are printed all the technical information for sowing and the article code for the reordering (the same printed on this catalogue).

Please note that for each item ordered, the minimum quantity is one complete show box (25 bags).

Il periodo di semina è puramente indicativo, esso può variare anche sensibilmente in base alle condizioni climatiche ed al metodo di coltivazione.

# LEGUMI

Tutte le varietà di legumi sono disponibili in astucci litografati da gr. 250 - gr. 500 e kg. 1.  
Sul retro di ogni astuccio troverete dettagliate informazioni tecnico-colturali.

All "legumi" varieties are available in boxes of gr. 250 - gr. 500 and kg.1.  
On the back of every box are printed all the technical information for sowing.

**N.B. Quantità minime da ordinare:**

250 Gr.: Minimo Kg. 7,5 N.30 astucci e mutipli

500 Gr.: Minimo Kg. 10 N.20 astucci e mutipli

1000 Gr.: Minimo Kg. 10 N.10 astucci e mutipli

**N.B. Minimum quantity to order:**

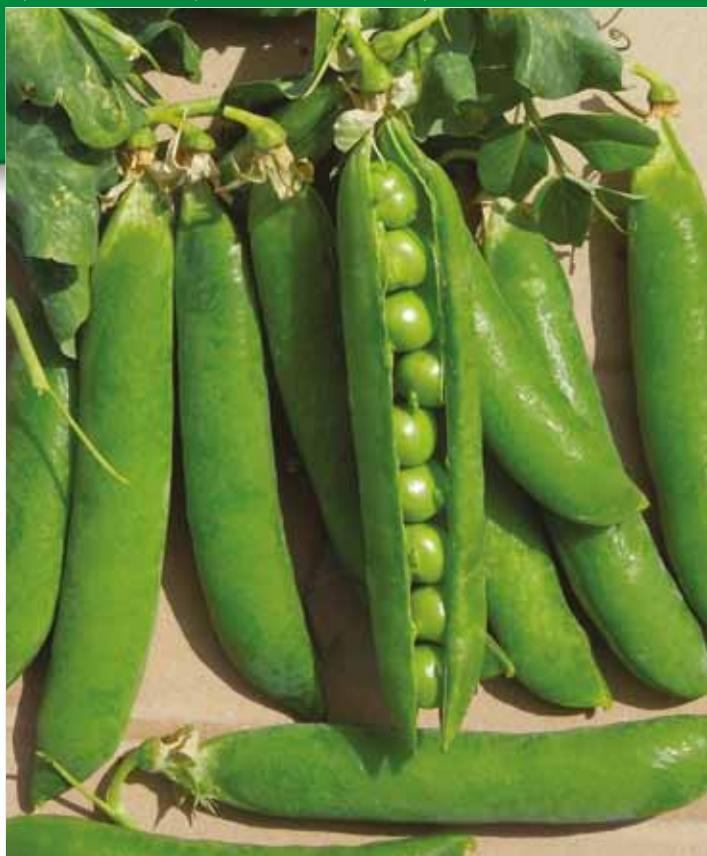

250 g.: 30 boxes (Kg. 7,5) or multiples

500 g.: 20 boxes (Kg. 10) or multiples

1000 g.: 10 boxes (Kg. 10) or multiples

Il periodo di semina è puramente indicativo, esso può variare anche sensibilmente in base alle condizioni climatiche ed al metodo di coltivazione.

# Buste MAXIFlor

Buste Termosaldati Formato reale cm. 11,5x15,7+0,3 con EUROFORO

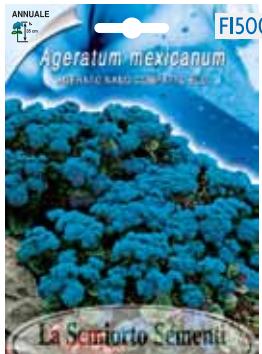

Tutte le buste "MAXIFlor" sono confezionate in pratici contenitori espositivi. Sul retro di ogni confezione troverete tutte le informazioni tecnico-colturali ed il codice articolo per il riassortimento (lo stesso come da catalogo).  
N.B. Non si accettano ordini inferiori ad un contenitore per varietà e cioè N. 25 buste.

All "MAXIFlor" bags are packed in special show boxes. On the back of every seed bag are printed all the technical information for sowing and the article code for the reordering (the same printed on this catalogue). Please note that for each item ordered, the minimum quantity is one complete show box (25 bags).

Il periodo di semina è puramente indicativo, esso può variare anche sensibilmente in base alle condizioni climatiche ed al metodo di coltivazione.

# TAPPETI ERBOSI

PER AVERE  
IL GIARDINO  
PIÙ BELLO  
DEL VICINO!

# Ridotta Manutenzione

## 430 - Dichondra Repens

Erba perenne. Pianta nana strisciante, con foglie piccole, rotonde e di colore verde intenso. Adatta a tutti i tipi di terreno, non richiede tagli ed è poco esigente di acqua. Non è molto resistente al freddo, infatti, a basse temperature scompare la parte aerea che rivegeta, però, nella primavera successiva. Forma prati ornamentali di lusso. Si semina alla dose di gr 10 x mq.

# MISCUGLI di PREGIO

424  
TOP English GARDEN

416  
TOP Green GARDEN

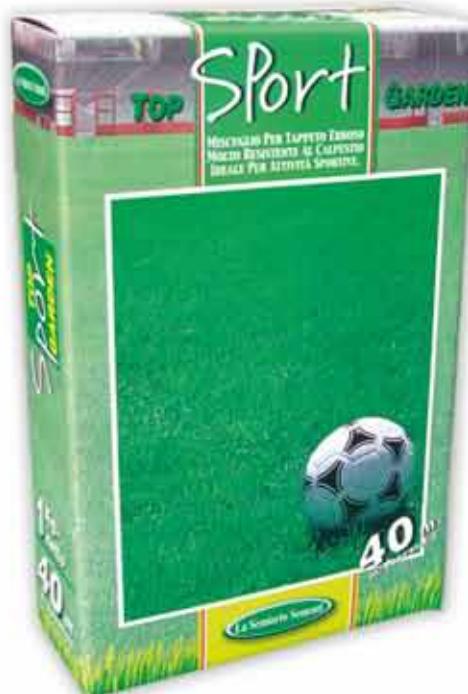

Miscuglio di varietà a portamento nano che richiede meno manutenzione e si adatta benissimo alle condizioni climatiche del Mediterraneo. Forma un tappeto erboso molto compatto e di colore verde intenso.

E' il miscuglio ideale per il clima Mediterraneo. Molto resistente alla siccità ed al calpestio.

418  
TOP Shady GARDEN

Miscuglio per terreni ombreggiati. Molto resistente al calpestio.

420  
TOP Sport GARDEN

Miscuglio di varietà a crescita rapida molto resistente al calpestio. Ottimo per la formazione di tappeti erbosi adatti alle attività sportive.

# MISCUGLI CLASSICI

417  
**Terreni Soggiornati**

Miscuglio di varietà a crescita medio-rapida ideale per terreni con un buon irraggiamento solare.

421  
**Attività Sportive**

Miscuglio di varietà a crescita rapida ideale, molto resistente al calpestio, si rigenera rapidamente riparando i danni subiti.

422  
**Miscuglio per Scarpate e altri su richiesta!**

## SINGOLE ESSENZE

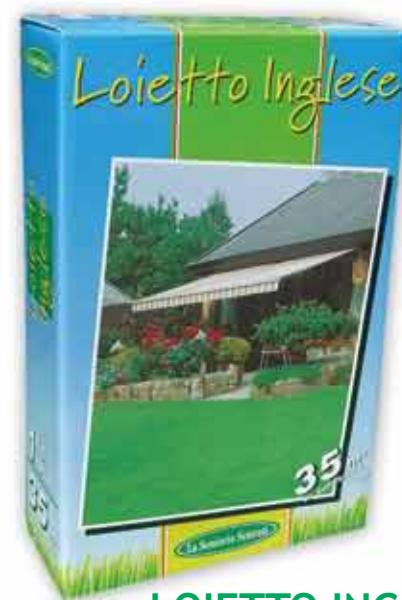

432

### **Trifoglio Nano (Trifolium Repens)**

Erba perenne. Pianta nana strisciante a fiori bianco-rosei; adatta per terreni freschi e sciolti, anche a scarsa fertilità. Ottima come anterosiva dei terreni, forma prati molto fitti di lunga durata. Foglie piccole, rotondeggianti, di colore verde medio, maculate di chiaro con stelo non molto alto. Richiede pochissime falciature. Per la semina occorrono circa gr 5-10 x mq.

434

### **TRIFOGLIO NANISSIMO**

426  
**LOIETTO INGLESE**  
Si semina durante tutto l'anno in ragione di gr 40 x mq.

428

**LOIETTO INGLESE (Varietà Speciale)**  
Colorazione verde scuro, portamento nano, molto resistente e ridotta manutenzione.  
Si semina durante tutto l'anno in ragione di gr 40 x mq.

# Microterme e Macroterme

## MICROTERME

### 454 - AGROSTIDE STOLONIFERA *Agrostis Stolonifera*

Erba ad alta densità che richiede una manutenzione accurata, con foglie di colore verde scuro e stoloni lunghi e strisciante. Tollera molto bene il taglio e si rigenera da rizomi e stoloni danneggiati. Forma tappeti morbidi, frondosi, uniformi ed ad alta densità e qualità. Non tollera molto il caldo e la siccità. Si mescola bene ad altre specie, ma diventa dominante. Si semina alla dose di 10 gr x mq.

### 442 - AGROSTIDE TENUE *Agrostis Capillaris*

Pianta con fogliame fine, verde bluastro. Apparato radicale strisciante che una volta insediatosi copre molto bene e tollera le falciature basse. Forma un prato fine e soffice, molto denso, resistente al calpestio e al freddo, adatta per terreni poveri e siccitosi. Molto utilizzato nei campi da golf. Si semina alla dose di 5-10 gr x mq.

### 445 - FESTUCA ARUNDINACEA

Di colore verde corposo, ha un apparato radicale profondo. L'erba cresce a macchie con orma di rizoma. Molto tollerante alla siccità ed al calore. Resistente al calpestio e di ottimo vigore. Se seminato in grosse quantità (gr 50 x mq) forma un tappeto uniforme e di bellissimo aspetto.

### 444 - FESTUCA RUBRA ssp RUBRA

Graminacea a foglia fine. Tappeto eccellente e molto denso di colore verde medio che richiede un'accurata cura. Si presta al taglio basso e si adatta bene all'ombra ma è abbastanza lento ad insediarsi. Si semina in media alla dose di gr 30 x mq.

### 428 - LOIETTO INGLESE *Lolium Perenne*

E' una delle specie di prato più diffuse in Italia. E' comunque una delle meno pregiate in quanto ha foglie larghe, sviluppo rapido e, di conseguenza, necessita di frequenti rasature ed irrigazioni. Si adatta bene ai climi temperati, freschi, umidi e piovosi. Forma un tappeto fitto ed abbastanza resistente al calpestio. Si semina in ragione di gr 40 x mq.

### 456 - POA PRATENSIS

Pianta rizomatosa, adatta per terreni freschi, profondi, ricchi e di clima fresco-umido. Forma un tappeto molto elegante e durevole con numerosi rizomi; ad insediamento completato risulta molto resistente al calpestio. Foglie medio-fine di colore verde brillante, lisce e luccicanti che si chiudono a punta. Si semina alla dose di gr 25 x mq.

## MACROTERME

### 438 - GRAMIGNA COMUNE *Cynodon Dactylon*

Graminacea con forte apparato radicale, rizomatoso e stolonifero, strisciante a rapido accrescimento, di taglia medio-bassa. Si adatta a tutti i tipi di terreni, formando un prato fitto di un bel colore verde brillante, resistente alla siccità ed al calpestio. E' l'ideale per i climi caldi e, appartenendo alle macroterme, in presenza di forti gelate invernali, va in dormienza ed ingiallisce per poi rivegetare in primavera. Si semina alla dose di gr 20 x mq.

### 441 - BAHIAGRASS *Paspalum notatum*

Erba di Bahia a tessitura media ma con foglie morbide, molto utilizzata nelle locali marine. Usata in prati strisciante perché presenta un sistema a rizomi e stoloni. Ha un apparato radicale molto forte ma è lento nell'insediamento e nella crescita. Tollera la siccità, la falciatura regolare e le sommersioni occasionali. Molto utilizzata per superfici vaste. Si semina alla dose di gr 10 x mq.

### 439 - KYKUYU *Pennisetum Clandestinum*

L'erba di Kikuyu è una perenne con stoloni e rizomi vigorosi. E' adatta ai climi subtropicali e temperati. Cresce bene in primavera, estate, autunno e, sebbene in inverno vada in dormienza, rimane abbastanza verde soprattutto nelle zone calde. A causa del suo habitat aggressivo, è molto utilizzata come legante del suolo e per il controllo dell'erosione. Si semina alla dose di gr 15 x mq.

**Per la germinazione delle Macroterme sono richieste alte temperature! Si raccomanda di seminare in periodi caldi.**

# VARIE

*Per migliorare la gamma dei servizi e soddisfare anche le esigenze più particolari, "La Semiorto" ha selezionato dai mercati nazionali ed internazionali gli articoli più interessanti e di più elevata qualità.*

*In order to better our range of services and to satisfy all customer's needs, "La Semiorto" has selected the most interesting and top quality products from national and international markets.*

## BULBI DI CIPOLLE

Per produrre degli eccellenti bulbi di cipolle, è possibile utilizzare dei bulbetti di calibro 14-21 mm e di peso variabile da 1 a 5 gr. Si evitano così le onerose operazioni del semenzaio ed il ciclo colturale si riduce di circa 25 gg rispetto all'impiego del seme. I bulbetti debbono essere piantati direttamente a dimora in solchetti profondi 5 cm col girello rivolto verso il basso, nel periodo da ottobre a marzo.

**Aglio**

(Bulbilli da seme)

## FUNGHI "FAI DA TE"

In soli 30 giorni si ottengono funghi freschi, profumati e naturali. Mantenere il composto umido, con frequenti bagnature (ma poca acqua) ed i funghi nasceranno dai fori del sacco. Tagliare la plastica se i funghi nascono dove non ci sono i fori.

Luoghi di coltivazione: preferibilmente in locali chiusi, quali stanze di abitazioni, cantine, garage, stalle, fienili, ma anche all'aperto in giardino, orti e terrazze, purchè in angoli riparati dal sole e dal vento.

Non esporre mai ai raggi diretti del sole o al vento. Si richiede luce di penombra. Temperatura di coltivazione: 10-25°C.

# VARIE

## ROSE E FRUTTI MINORI

Nel periodo autunno-invernale, "La Semiorto" dispone di una discreta collezione di piante di rose a cespuglio, polianta e rampicanti dai colori più vivaci ed attraenti, nonché di frutti minori quali, more, lamponi, ribes, uva spina, etc.

Le piante sono incerate per evitare la perdita di umidità dei rami, e con le radici rinchiuse in un sacchetto impermeabile contenente materiale umido inerente.

Ogni cartone contiene 15 Piante PLANTARETTE (3 piante per ogni colore). La pianta, di ottima qualità, viene confezionata in busta. Il substrato in terriccio è avvolto da una rete biodegradabile. Il tutto viene confezionato all'interno di una scatola litografata.

## BULBI DA FIORE

Sono inoltre, disponibili bulbi da fiore per colture primaverili ed autunnali di elevata qualità, garantiti anche dalla provenienza olandese.

Tra i bulbi primaverili sono disponibili:  
LILIUM, FREESIA, GLADIOLO, BEGONIA, etc.

Tra i bulbi autunnali sono disponibili:  
GIACINTO, TULIPANO, NARCISO, CROCUS,  
AMARYLLIS, ANEMONE, FREESIA, IRIS, etc.
